This 32-story structure consists of 293-units and a ground floor retail component with approximately 200 feet of avenue frontage. The masonry wall construction is a monochromatic brick pattern, with slab-to-slab windows. The design juxtaposes mid-size commoditized spaces with large-scale finishes to enhance the design of each unit. 8' entrance doors and closets, and window walls are featured in every apartment. A courtyard in the 27th Street entrance infuses Japanese-inspired landscaping and modern movement architecture, and features a water wall with pitched pilasters to contain the water circulation system.
